

Reusing Items to Create Art, Crafts, and Science Projects

Brief Description of the Project

Students create art, crafts, and science projects reusing items that would be recycled or thrown out as trash.

Full Project Description

Items can be made into puppets, bird feeders, collages, paper sculptures and piñatas. Students will report and take notes on what items are being reused and how much. Additionally, they will explain the benefits of reuse. For other ideas on reuse, please check out Reuse Kits at [Solutions to Waste Program - Sustainability Department - San Mateo County](#).
